

# Meet VEEM Propellers At Your Nearest Marine Trade Show

## PRESS RELEASE

23 February 2009

VEEM Propellers have made recent changes to their website to now show details of the upcoming exhibitions and trade shows that VEEM and their distributors will be attending. To meet with the leaders in design and innovation of high performance propellers visit [www.veem.com.au](http://www.veem.com.au) to keep up to date with VEEM's next trade show. By seeing VEEM or one of its distributors in person, you can see first hand the quality they produce and with expert advice you will be assured the VEEM products are of the highest quality.

VEEM provides custom propellers for super yachts, military vessels, pleasure craft and sports fishers, passenger and vehicle ferries, as well as fishing and work boats. With no industry spared, VEEM is the first choice for many of the top boat builders.

VEEM has recently launched its patented Interceptor Propeller™ technology which lets you adjust the effective pitch of its fully CNC machined propellers. This is achieved with an exchangeable protruding plastic strip on the trailing edge of the pressure face of each blade. This protruding strip, or Interceptor, creates a 'water wedge' which changes the water flow over the blade - the higher the Interceptor, the higher the propeller pitch. The Interceptor strips, which are colour coded to easily identify their height, can even be changed underwater in just a few minutes. Changing strips now allows alterations to propeller pitch at any time, so that changes in boat weight or trim, windage caused by adding towers or clears, running tanks full to maximise range or even chasing top end speed at your local fishing tournament; can all be easily accommodated.

VEEM Propellers is a privately owned company located in Canning Vale, 15km's south of Perth, Western Australia. VEEM employs 170 people and has been making propellers since the 1950's and supplies propellers to a growing list of the world's finest boat builders including Viking, Spencer, SeaRay, Cabo, Princess and Riviera.
