

VEEM Interceptor Propeller on display at the 2009 Sanctuary Cove International Boat Show

Press Release

12 May 2009

The revolutionary VEEM Interceptor Propeller™ will be on display at the 2009 Sanctuary Cove International Boat Show. From May 21-24, VEEM's Australasian distributor Austral Propellers will be displaying the innovative Interceptor Propeller in Pavilion A, Stand 146.

VEEM's Interceptor™ technology allows the pitch of the propeller to be adjusted quickly and accurately, without mechanically compromising the fully CNC contoured blade surface that is standard on all VEEM propellers. This advanced, patented design operates by fitting adjustable height strips into a machined groove in the trailing edge of the propeller blade. It is a unique method of adjusting pitch which allows the maximum performance potential of the vessel to be obtained upon launch, and throughout the life of the vessel.

The VEEM Splash and Forget™ concept allows initial vessel commissioning to be completed in a single sea-trial, as any pitch alteration can be easily completed by changing the strips. This eliminates the need to either change to a new propeller or mechanically alter the new one, and a diver can simply change the strips in minutes.

VEEM Propellers is a privately owned company located in Western Australia and has been making propellers for over 50 years. Interceptor Technology™ is being used on many different types of vessels including Super Yachts, Sport Fishers, Pleasure Boats and Patrol Boats. The Interceptor™ Propellers are internationally recognised and are being fitted to many of the world's finest boatbuilders.
